

Not only a guardrail but a complete safe access and hoist solution with built-in hand grips

Our HatchGuard is a bolt-on non-penetrating safety guardrail with self-closing safety gate and hand grips to assist in climbing through the hatch. It is available in either a galvanized steel or painted steel finish. The HatchGuard meets and exceeds the applicable roof hatch guardrail codes. Now available with an optional roof hoist attachment to safely lift materials through the hatch.

The self-closing safety gate is a superior solution compared to conventional chain systems which often aren't secured and wouldn't support a fall.

No-penetration design. Our HatchGuard uses a clamping mechanism to fasten to the roof hatch. No drilling through the roof hatch or roof membrane is required. HatchGuard is supported by four corner feet and is very sturdy and secure.

Grab bars provide grip for travelling into or out of hatch.

Features

- Fits a wide range of hatch sizes, comes with two sets of adjustment brackets.
- Grab bars for a hand-hold while climbing through hatch.
- Industrial quality self-closing safety gate to protect hatch opening.
- Fast and easy installation.
- Provides open hatch protection.
- Galvanized finish is standard, powder-coated is optional.
- Pre-drilled and slotted holes for quick fit and adjustment.
- Available with bolt-on hoist option to safely lift materials through hatch. Hoist folds down when not in use.
- Gate can be mounted to open right or left.
- Assembles using simple handtools.

Hatch Size Fitment	Galvanized Finish	Hoist Add-on
