

Permanent or Temporary / No Penetration Into Roof / Steel Warning Flags

Perma-Line is a warning flag system consisting of coated aircraft cable and laser cut metal warning flags. It can greatly reduce the cost of an entire roof installation by visually protecting the non-serviceable areas of your roof and creating controlled access zones, when used along with Safety Rail 2000. With this innovative system you will no longer need to make monthly trips to your rooftop to replace worn and torn plastic flagging. Once in place, the Perma-Line remains intact until you want to move it. Best of all it's a non-penetrating system, preserving the integrity of your roof.

The Perma-Line is not a motion stopping or fall arrest anchor device. It is a highly visible warning barrier that exceeds OSHA regulations for warning line systems. The bases are the same as used by Safety Rail 2000 and the systems can be used in combination with each other for complete rooftop protection.

Features

- Utilizes the Safety Rail 2000, 108 lb counterweight bases.
- Coated aircraft cable with laser-cut powder-coated yellow warning flags.
- Long-term warning line system, doesn't fall apart like typical wooden board and yellow rope warning lines.
- Withstands hurricane force winds.
- Combine with Safety Rail 2000 to provide complete rooftop protection.
- Available in Powder-Coated yellow bases and stanchions with yellow flags or galvanized bases and stanchions with yellow flags.
- Repositioned easily using EZ Mover cart to lift warning line bases.
- Economical solution for areas on roof where Safety Rail 2000 may not be required.

Description	Yellow	Galvanized
100' Perma-line kit	SRY300	SRG300
Extra Base	SRY014	SRG014
Extra Stanchion	SRY181	SRG181
Extra Pin Assembly	SRY016	
100' Metal Flags and Cable	SRY297	SRG297
Each 100' kit includes 100' - flagging, 3 - bases, 4 - stanchions, 4 - locking pins		

Warning line installed 6'-10' back from roof edge
