

The fast, safe, and easy way to access tops of trucks and railcars

Fixed access platforms and gangways are a great solution for quickly and safely accessing railcars or transport trucks. Systems can be configured with telescopic gangways, tracking gangways, safety cage, self-closing safety gates, canopy, as well as numerous other options. Hose handling arms can also be installed on the fixed access platforms. Our platforms are installed onto poured foundations in the ground. We handle the complete turn-key project including design, proposal drawings, engineered approved drawings, installation of both foundations and the platform, and final review and sign-off that the system is safe to use. Platforms come complete with safety handrails, access stairs, access gangway and cage for fall protection, as well as many options available including hose handling equipment, engineered anchor points for personal fall protection, and extendable guardrails.

Features

- Galvanized steel or aluminum construction.
- Counterbalanced gangway systems.
- Tracking safety gangway can be positioned along platform where required and then lowered into position.
- Full CAD design services to verify platform design and requirements.
- Platforms can be as small as 1 pedestal or up to 50' to suit an entire truck or a transport truck with pup.
- Safety handrails on walkway and guardrails on safety cage.
