

FabEnCo Self-Closing - Self-Closing Safety Gates

W.S. Safety is the Canadian stocking distributor for FabEnCo self-closing safety gates. These self-closing yellow safety gates will dramatically increase the safety of your employees. Use these industrial safety gates if you have unprotected openings on your ladders, platforms, stairs, catwalks and mezzanines.

Force-tested up to 300 lbs., the FabEnCo self-closing safety gates are easy to pass through and eliminate the need to stop and lift a bar or undo a chain. Installation of the FabEnCo industrial safety gate is very simple requiring only 10 to 15 minutes of your time using simple hand tools. There's no cutting, welding or drilling necessary.

A tried and true design, these gates have been in use in industrial applications for many years and function like new after many years of use.

W.S. Safety carries all FabEnCo products. Some popular models are: A series, XL Series, R Series and Z Series self-closing safety gates. Each of these series offers a safety yellow powder coated option, to provide yellow safety gates. See specifications below to determine which series will best suit your safety gate needs. We are available for further questions and consultations as to the best product for your application.

FabEnCo Safety Gate A Series: The Original Self-Closing Safety Gate

- Easy to Install – no cutting, welding or drilling. Installs in minutes using simple hand tools
- Stainless Steel Spring – a custom-made stainless steel spring automatically closes the gate after each passage
- Positive Stop – a unique stop mechanism provides positive stop without handrail post contact
- Variety of FabEnCoat™ FabEnCo Safety Gate Finishes – available in galvanized steel or safety yellow powder coated, stainless steel or aluminum.

Safety Gates have been a proven and effective way to address fall hazards. Typical areas that are addressed by safety gates are the tops of access ladders, crossover and platform openings, pedestrian access walkways and dock loading staircases. The self-closing feature insures that gates are closed automatically thereby ensuring safety at hazardous areas.
